### WHEELCHAIR/MOBILITY AID

Upload image

Number of batteries required to operate the wheelchair / mobility aid: .....

### Battery Type:

- |                                                                                      |                                                                                      |
|--------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------|
| <input type="checkbox"/> Lithium-ion (will remain installed) <sup>1</sup>            | <input type="checkbox"/> Dry-cell non-spillable (will remain installed) <sup>1</sup> |
| <input type="checkbox"/> Lithium-ion (will be removed) <sup>2</sup>                  | <input type="checkbox"/> Dry-cell non-spillable (will be removed) <sup>3</sup>       |
| <input type="checkbox"/> Wet-cell non-spillable (will remain installed) <sup>1</sup> |                                                                                      |

<sup>1</sup>If the battery remains installed, the power source must be disconnected and insulated. (e.g., the key turned off and removed, securing the power switch to the "Off" position, or a quick disconnection of controls).

<sup>2</sup>If the lithium-ion battery is removed, it must be packed in a protective pouch/container and carried only in the cabin.

<sup>3</sup>If the dry-cell non-spillable battery is removed, it must be packed in a strong rigid packaging and carried only in the cargo hold.

### Battery power:

Watt-hour rating for lithium-ion (Li-ion) batteries: .....

### Spare battery (if applicable):

Total number of spare batteries carried:.....

Watt-hour rating for lithium-ion (Li-ion) batteries: .....

Other instructions: .....

Batteries: .....

If your itinerary involves travel on another airline, you should check the specific wheelchair conditions of carriage for that carrier before making your booking.
